

ABSTRACT OF THE DISCLOSURE

For making outputs of a drive circuits accurate,
the drive circuit is composed of a plurality of
current signal generation circuits for outputting a
5 current signal to each of a plurality of output units,
a current signal output line to which outputs of the
plurality of current signal generation circuits are
commonly connected, a correction value output circuit
for outputting a correction value obtained by
10 evaluating the output of one or more specific
circuits of the plurality of current signal
generation circuits on a basis of current values
output through the current signal output line, and a
correction circuit for correcting an image signal
15 supplied to the current signal generation circuits by
means of the correction value.
